Voyage Planning & Management:

FleetManager

Providing granular
detail on fleet activity

Discover the digital tools to **streamline fleet operations**

FleetManager connects data from ship to shore, providing a clear, up-to-date view of vessel locations and all voyage elements in context.

Data overlays can be toggled on and off to interrogate voyages for greater clarity, improved situational awareness, and enhanced decision-making. The shoreside solution enables fleets to operate consistently, adapt quickly to regulatory changes, and simplify compliance across all vessels.

Enable active support anytime, anywhere

Managing vessels from shore is demanding, particularly when fleets are spread across global waters. Effective support relies on clear oversight of vessel positions, progress and risks, which FleetManager delivers through accurate tracking, synchronised views and centralised configuration.

Track vessels in real time

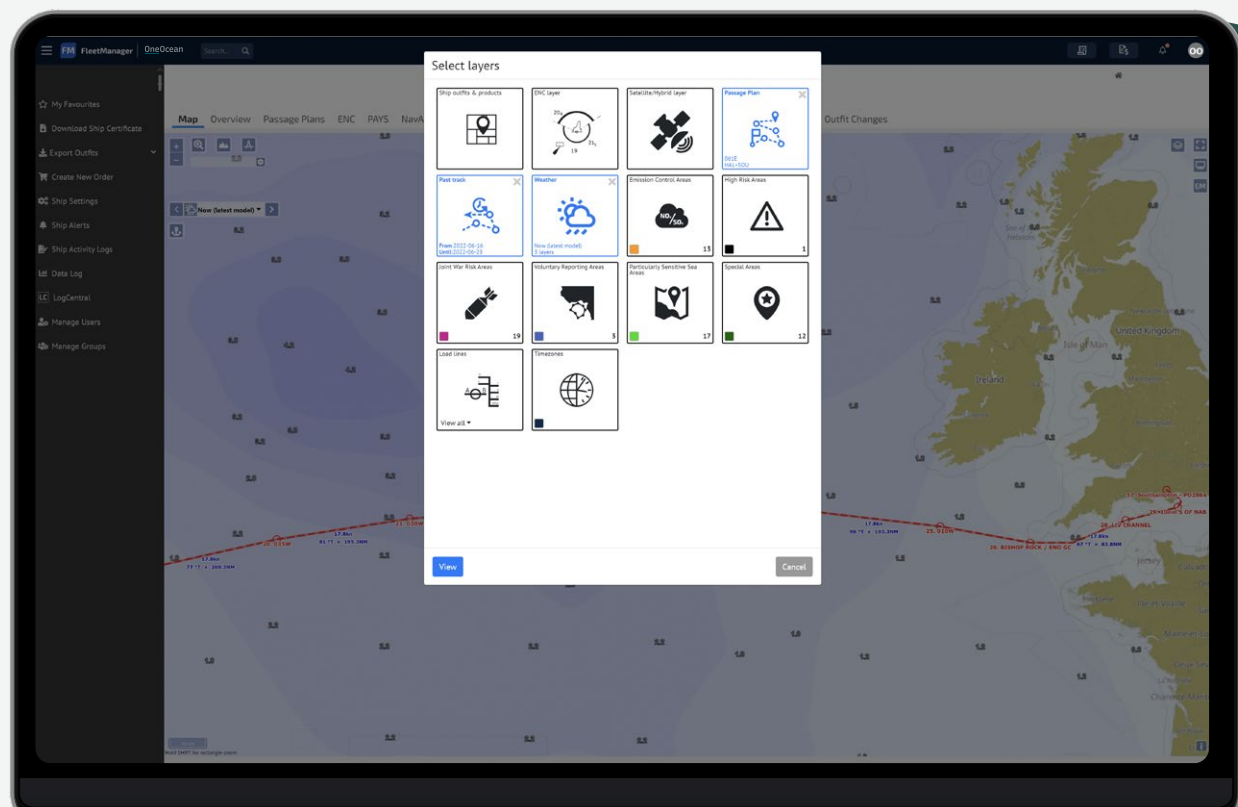

FleetManager gives shoreside teams a live visualisation of every vessel using AIS and GPS data. Voyage progress can be monitored against approved passage plans, helping teams quickly assess each vessel and plan associated operations. Nearby targets within a 20-nautical-mile radius are also visible, while shoreside alerts highlight route deviations or entry into regulated waters*, supporting quick action and safer voyages.

Share the same view

Ship and shore access the same multi-layered display of voyage information. These synchronised views provide full visibility of passage plans and the vessel's situation, helping all stakeholders make decisions based on the same reliable data.

Configure policies with ease

Shoreside teams can set alerts, define safety parameters, and deploy company policies in minutes, directly to vessels from one portal. UKC allowances, squat formulas and waypoint table formats can be applied consistently across an entire fleet, standardising operations and reducing errors. In addition, waste stream and environmental parameters can be controlled centrally, supporting fleet-wide regulatory compliance*.

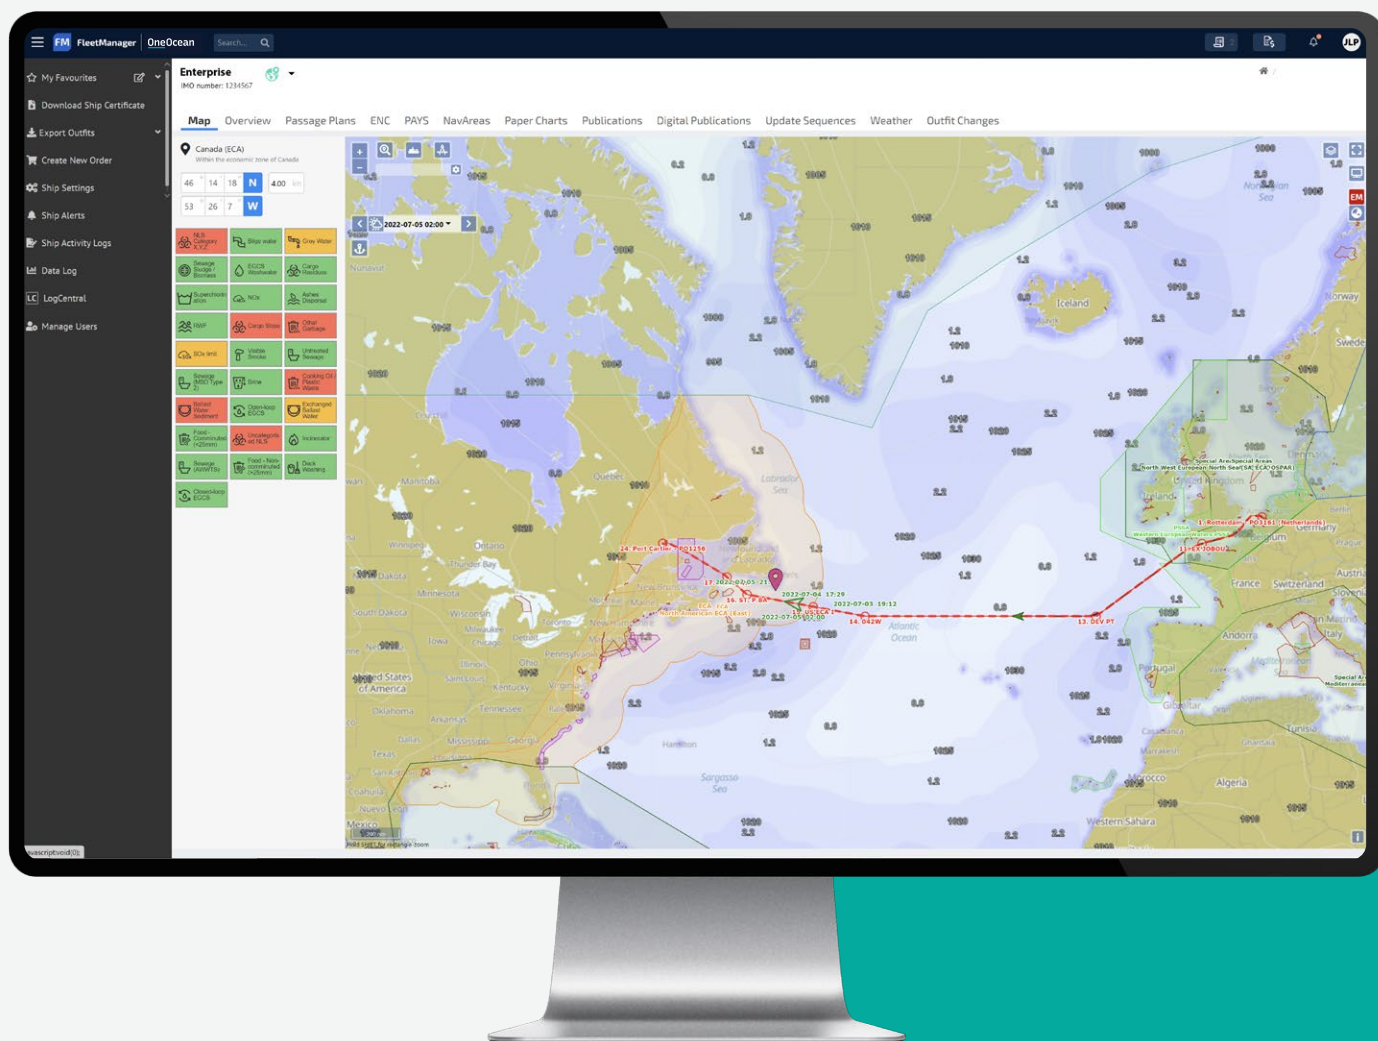

*Available when used alongside our EnviroManager+ solution

Connecting shoreside and onboard teams

Stay alert

FleetManager connects shoreside stakeholders to the PassageManager and EnviroManager+ solutions used aboard, offering synchronised views enriched with dynamic overlays – including weather, environmental zones, ENC data, and high-risk areas. These overlays provide enhanced situational awareness by clearly visualising regulatory boundaries, hazards, and evolving conditions. This shared visibility strengthens communication and decision-making, while configurable alerts notify select personnel when vessels approach regulated waters* or Joint War Risk Zones.

Predictive alerts can be configured to warn shoreside users up to 95 hours before entering or exiting regulated waters*, enabling them to notify vessels with ample time to prepare and respond. Customised intervals for shoreside email alerts can also be applied in war-risk areas to ensure company procedures are followed consistently. By delivering accurate position data and timely warnings, the system allows shoreside teams to ensure compliance with safety protocols, mitigate potential threats, and support swift corrective action when it is needed most.

*Available when used alongside our EnviroManager+ solution

Voyage Planning & Management: FleetManager

Keeping shoreside teams **in control**

FleetManager brings tracking, alerts and configuration together in one solution. Shoreside teams gain a single portal for oversight and control, reducing risk and ensuring every vessel operates to the same high standards.

By uniting these capabilities in a single portal, FleetManager gives teams the insight to act decisively, maintain consistency, and operate with confidence that every voyage is efficient and compliant.

Highlights

- Real-time vessel tracking
- Shared visibility across ship and shore
- Centralised policy and configuration management

Benefits

- **Make confident decisions** with one trusted source that enhances your situational awareness
- **Ensure fleet-wide consistency** and reduce the risk of errors or non-compliance with a connected solution
- **Protect against violations and infractions** with tools that support proactive monitoring
- **Operate more safely and efficiently** worldwide
